

Cement-Scapes LLC
Color Crown Coatings

Care card

Congratulations! You can look forward to years of beauty and convenience with your new

Color Crown Coating surface.

Clean regularly with a garden hose, occasionally using detergent. We recommend using dish soap. No Solvents. No Pine-sol.

Regular oil and Grease should not harm the surface and can be wiped up with a paper towel.

Tar can be easily removed with kerosene only. Battery Acid should be kept off the coating.

Gasoline can discolor the surface. Avoid over filling the tank.

Transmission Fluid should not be left on the surface more than a few hours. Wipe up with a paper towel or rag.

Rust can be removed; your Independent Dealer will do this for a nominal charge.

Tire skid mark requires Professional touch-up. This can be done for a small fee.

Fertilizer and Insecticide: Some products can damage the coating. If rust or discoloration develops, call your dealer for a professional touch-up.
